Part Definition Guide

Last Modified on 03/07/2026 11:16 am CEST

Author: Erik Åström

The Part Definition Guide lists, and provides a brief explanation on, all Attributes (parameters and **documents**) available in the **Coral** interface for a **Part**. Each Attribute also contains links to relevant articles on the **Knowledgebase** where possible.

Currently the Part Definition Guide is available in Teams using the following link: **Part Definition Guide.xlsx**

The intended use of the Part Definition Guide is as a tool to help when creating a **Part**, but also as a tool to use when performing a review of a **Part**.

If you run into any issues or think of a potential improvement on the Part Definition Guide, please provide feedback using this form: **Feedback for the Part Definition Guide**

The Part Definition Guide was created in the Product Development Improvements (PDI)-project, by Benjamin Magnusson, Peter Mikaelsson, and Erik Åström.
