# JJS/Ocado

# How to update items for JJS/Ocado in Coral & SAP

Coral:

All updates in Coral should be done according to the normal FlexLink standard rules but JJS/Ocado drawing number and revision should be updated in the *Description* field. If a beam length is changed this information should also be updated in the *Additional Information* field.

In assemblies a BOM-list document is included that is printed and added to the shipment. This must be updated accordingly with update of BOM-material, including the revision of this in Coral (see pictures below).

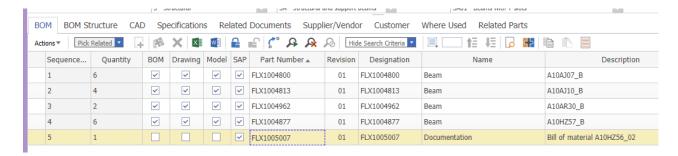

SAP:

The information in the *Description* field including length from *Additional information* field is manually added to the field *Material description* in SAP (see pictures below). This info ends up on the beam and/or packaging label (see packaging specification 6761283). If cost is changed contact the product manager for the TC assortment reg. possible update of T1-price.
